

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-3. (cancelled)

4. (currently amended) A glove comprising elastomeric material wherein said glove has an inner skin-contacting surface and an outer surface comprised of said elastomeric material, wherein said elastomeric material comprises a polymer selected from the group consisting of natural rubber latex, synthetic polyisoprene, nitrile, and blends thereof, and wherein said outer surface is coated with a composition comprising a mixture of silicone, ammonium salts of alkyl phosphates, and cetyl pyridinium chloride.

5. (original) A glove according to claim 4, wherein the glove is powder free.

6. (previously presented) A glove according to claim 5, wherein the elastomeric material is a natural rubber latex.

7. (previously presented) A glove according to claim 5, wherein the elastomeric material is polyisoprene.

8. (previously presented) A glove according to claim 5, wherein the elastomeric material is nitrile.

9. (previously presented) A glove according to claim 5, wherein the elastomeric material is a blend of two or more polymers selected from the group consisting of natural rubber latex, synthetic polyisoprene, and nitrile.

10. (original) A glove according to claim 4, wherein the silicone comprises polydimethylsiloxane.

11. (cancelled)

12. (previously presented) A glove according to claim 4, wherein the glove has a reduced coefficient of friction compared to the same glove without said outer surface coating composition.

13. (currently amended) A glove according to claim 4, wherein said coated outer surface of the glove has a coefficient of friction less than about 0.4.

14. (previously presented) A glove according to claim 4, wherein the glove has reduced stickiness when compared to the same glove without said outer coating composition.

15. (previously presented) A glove according to claim 4, wherein the glove has improved double-donnability as measured by the coefficient of friction when compared to the same glove without said outer surface coating composition.

16-41. (cancelled)

42. (currently amended) A glove comprising elastomeric material wherein said glove has an inner skin-contacting surface and an outer surface comprised of said elastomeric material, wherein said elastomeric material comprises a polymer selected from the group consisting of natural rubber latex, synthetic polyisoprene, nitrile, and blends thereof, and wherein said outer surface is coated with a composition consisting essentially of a mixture of silicone, ammonium salts of alkyl phosphates, and cetyl pyridinium chloride.
